ABOUT US

# Elevating Every Possibility

DSAB Lift is the authorized sales and after-sales service partner for SHARP Elevators in Indonesia, based in Jakarta Selatan. Through this partnership, DSAB Lift brings SHARP's global elevator, escalator, and moving walk technology to the Indonesian market, backed by local sales, installation coordination, and 24/7 customer service.

SHARP Trading Co., Limited is a joint-venture global trade organization operating since 1989, headquartered in Hong Kong, with elevator manufacturing bases in China (Zhejiang KNK Elevator Co., Ltd.) and Korea (Sharp Elevators Korea Co., Ltd.). SHARP elevators, escalators, moving walks and accessories are manufactured under ISO9001, ISO14001 and OHSAS18001 management systems, with international certifications including SASO, CE and CU-TR, and a service network spanning more than 50 countries across Asia, Europe, Africa, America and Oceania.

## Global Trade Organization

**1989** Since — SHARP Trading Co., Limited

**Hong Kong** Global headquarters

**China & Korea** Manufacturing bases

**50+** Countries served worldwide

# The Partnership at a Glance

**ESTABLISHED**

SHARP Trading founded 1989 (Hong Kong)

**LOCAL PARTNER**

DSAB Lift — Authorized Sales & After-Sales Service

**LOCATION**

Jl. Bungur 1, Kebayoran Lama, Jakarta Selatan

**PRODUCTS**

Elevator, Escalator, Moving Walk & Accessories

**MANUFACTURING**

China (Zhejiang KNK) & Korea (Sharp Elevators Korea)

**MARKET REACH**

50+ countries — Asia, Europe, Africa, America, Oceania

WHY DSAB LIFT

# Built on Experience and Reliability

*Advantages of choosing DSAB Lift as your SHARP Elevator partner*

## 14+ Years

Experience serving the SHARP Elevator brand

## 1,000+ Units

Installed across government and private sector projects

## Ready Stock

Elevator components kept in stock for faster procurement

## Japan-Origin Technology

Underlying elevator technology sourced from Japan

## Up to 3 Years

Extended warranty coverage on elevator and spare parts

## 12-Month Maintenance

Included maintenance period of one full year

## Rp 1,000,000 / month

Light maintenance cost after the free first-year period

## 1 Week Installation

Typical installation time for a single elevator unit

## 20+ Years

Average experience of DSAB Lift's technicians

# Engineering Built Around Performance

SHARP's 66,000 square-meter modern factory maintains an annual manufacturing capacity of more than 12,000 sets, equipped with metal plate production lines, permanent magnetic synchronous machine assembly, door operator manufacturing, and dedicated escalator and moving walk assembly lines. Highly intellectual robot production lines support digital management throughout the manufacturing process.

OUR EXPERTISE

# One Partner, Full Vertical Transportation

01

## Elevator

Passenger, panoramic, hospital, freight, car, home & dumbwaiter elevators

02

## Escalator

Public transport and heavy-duty escalators for high-traffic environments

03

## Moving Walk

Horizontal and inclined passenger movement for large facilities

04

## Engineering

Design, manufacturing, control systems and testing

05

## Installation

Site survey, engineering, installation and commissioning

06

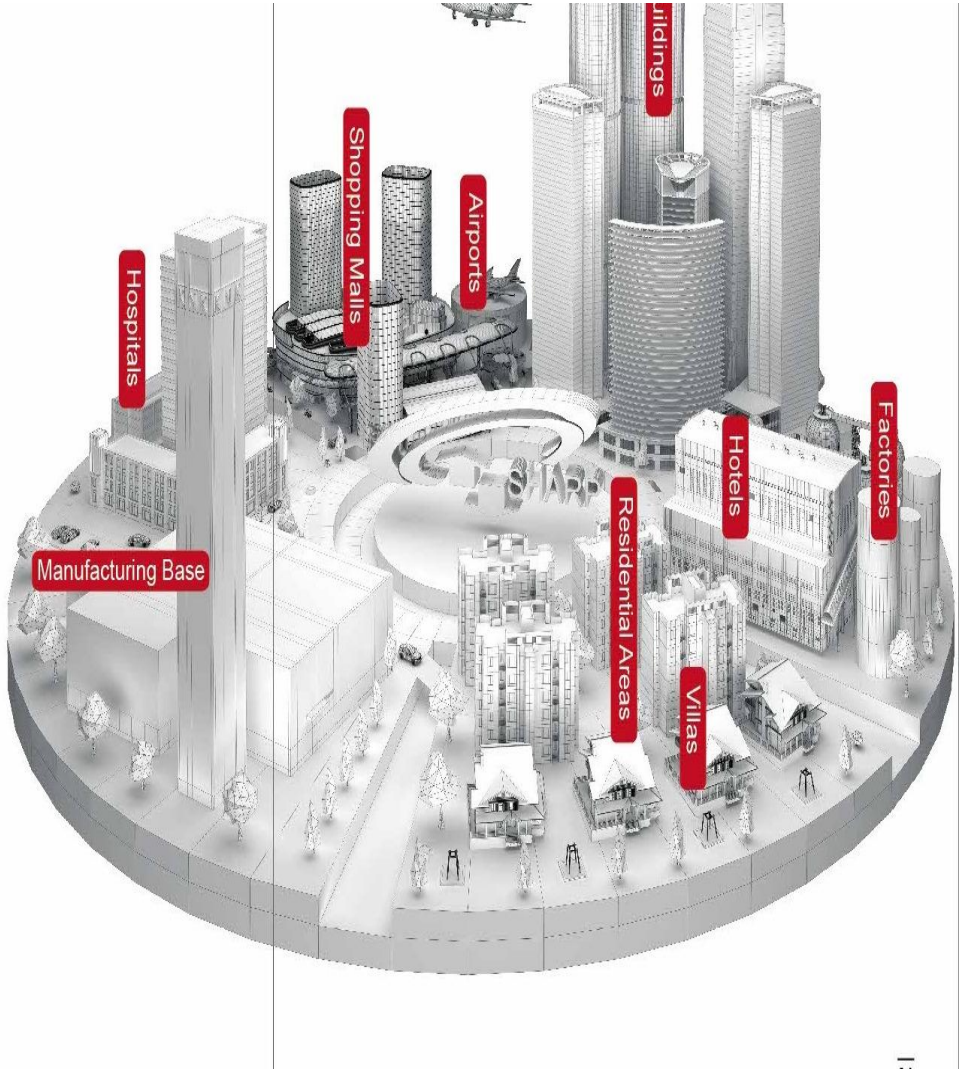

## Maintenance

Ongoing maintenance, repair and technical support

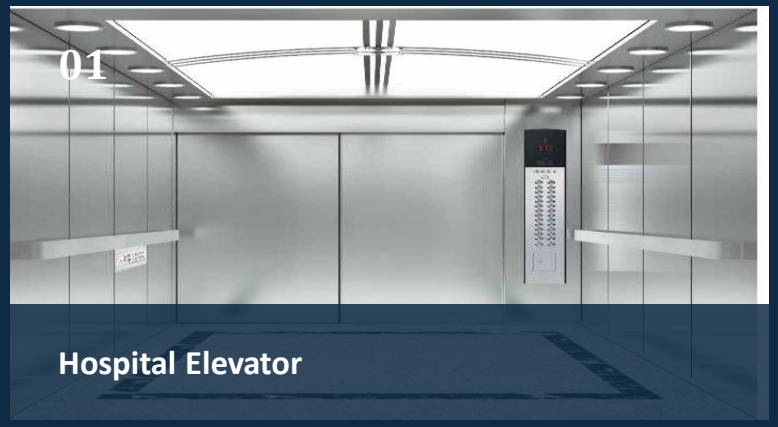

# Solutions for Every Building

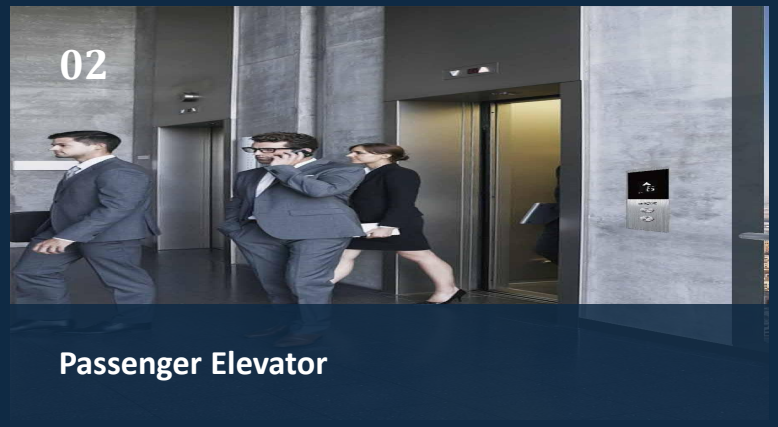

SHARP elevators, escalators and moving walks serve a wide range of building types and industries worldwide.

- **Hospitals**
- **Shopping Malls**
- **Airports**
- **Office Buildings**
- **Hotels**
- **Factories**
- **Residential Areas**
- **Villas**

# Complete Vertical Transportation Range

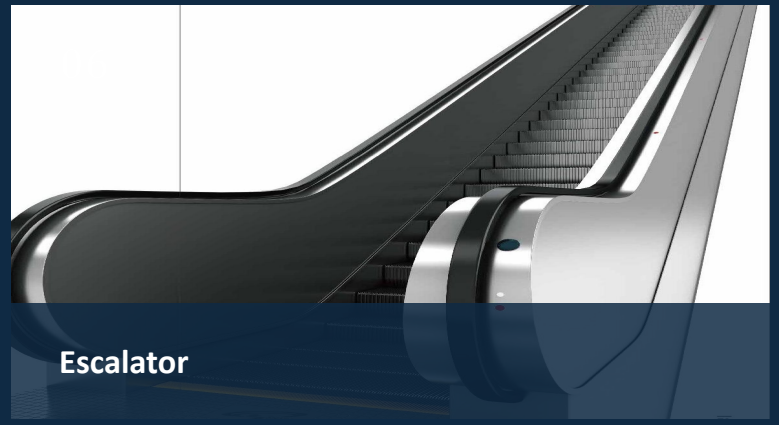

PRODUCT 01

# Hospital Elevator

Hospital elevators are specially designed to meet the demanding requirements of healthcare facilities. With a strong focus on safety, hygiene, smooth operation, and passenger comfort, these elevators provide reliable and efficient transportation for patients, medical staff, and visitors throughout the hospital.

## Reference Model — SE-B101

| | |
|---|---|
| **Ceiling** | Hairline stainless steel, LED energy-saving lights |
| **Ventilation** | Axial fan |
| **Cabin Wall** | Hairline stainless steel |
| **Handrail** | Hairline stainless steel |
| **Floor** | PVC |

***Door Opening Options:***

*Center opening · Telescopic opening · 4-panel center opening · Through opening*

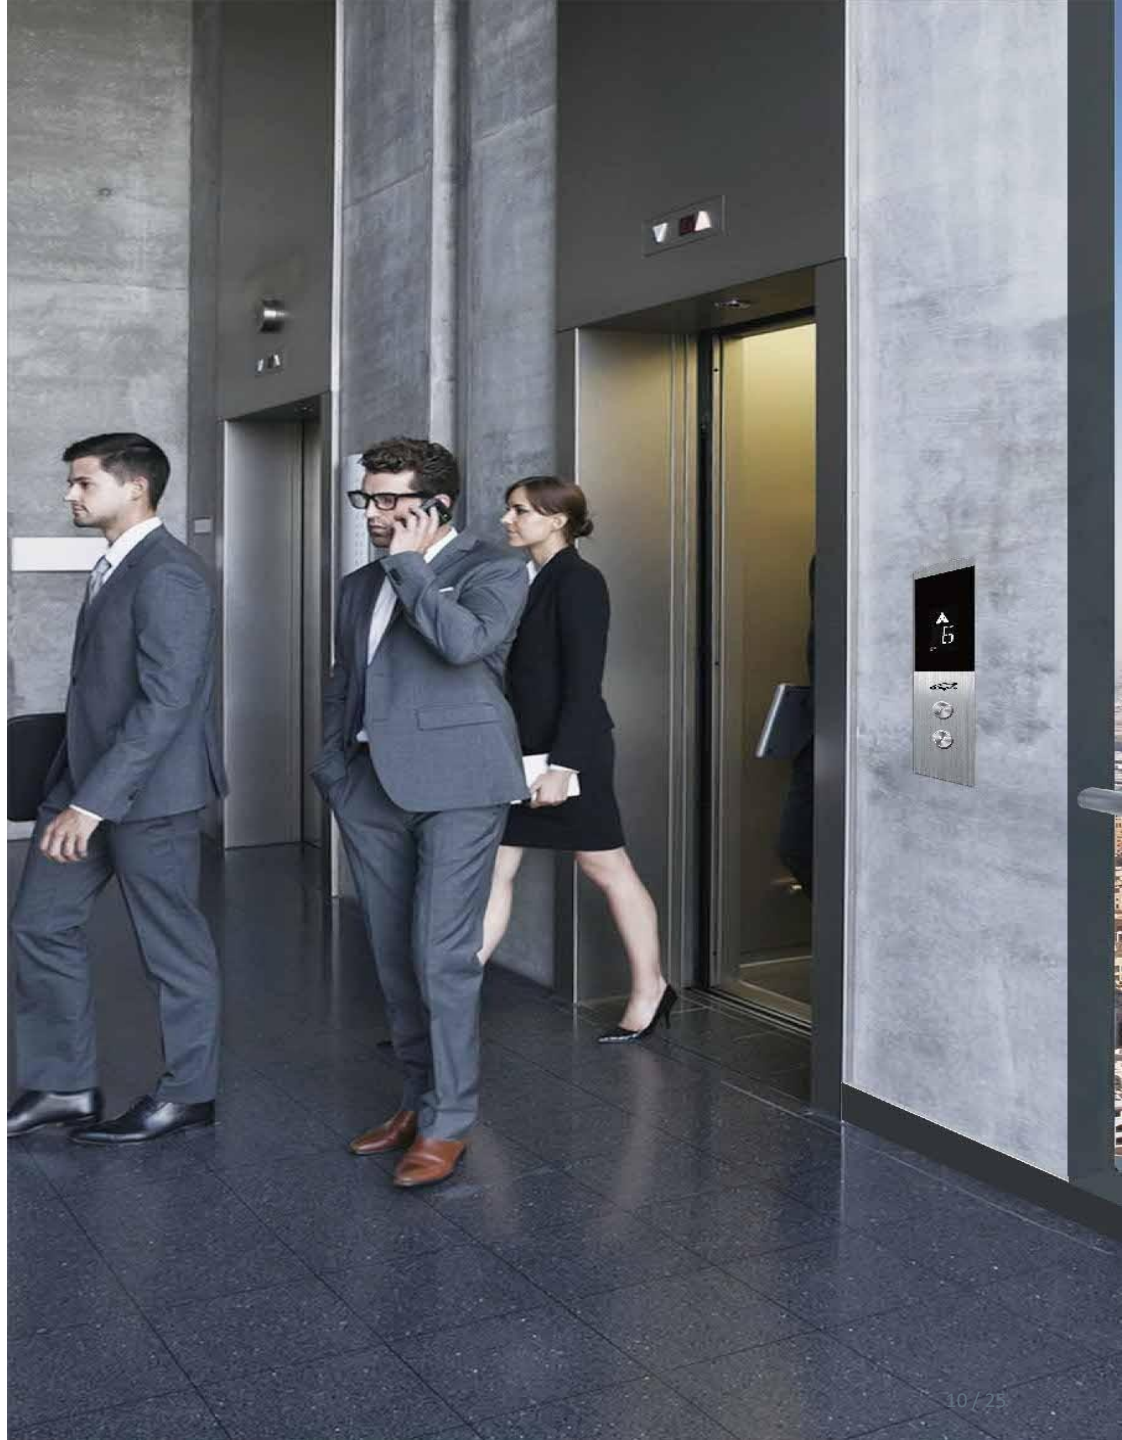

PRODUCT 02

# Passenger Elevator

Our passenger elevators are designed to provide safe, smooth, and comfortable transportation for residents, tenants, employees, and visitors. Suitable for low-rise, mid-rise, and high-rise buildings, they combine reliable performance, modern design, and efficient operation to meet a wide range of passenger transportation needs.

## Key Standard Features

- VVVF drive and door operator for smooth start, travel and stop
- Automatic pass without stop when cabin load is near preset value
- Reopen with hall call and express door closing
- Photocell door protection across full door height
- Fault self-diagnosis, logging up to 62 latest faults
- Emergency cabin lighting, five-way intercom and fire emergency return

PRODUCT 03

# Moving Walk

Moving walks provide a convenient and comfortable way to move people efficiently throughout large buildings and public spaces. Ideal for shopping centers, airports, transportation hubs, and commercial facilities, they offer smooth and safe movement while improving accessibility and the overall passenger experience.

## Applications

- Shopping centers & supermarkets
- Airports & transportation hubs
- Commercial facilities with heavy foot traffic

## Innovative Technology

Intelligent variable speed control, intellectual mains management (up to 36% energy loss reduction), and a highly integrated VVVF control system (about 40% energy saving vs. traditional drive systems).

PRODUCT 04

# Freight Elevator

Freight elevators are engineered to safely transport heavy goods, equipment, and materials between different levels of a building. With robust construction and high load capacity, they are ideal for warehouses, factories, commercial buildings, and industrial facilities where durability and dependable performance are essential.

### The Firm and Durable Cabin

High-strength plate construction with crash-barrier protection for the cabin.

### Highly Accurate Leveling

Leveling accuracy controlled within a millimeter-sized range.

### Energy-Saving

VVVF and speed-regulative technology can save 30%-50% energy vs. traditional AC-2 speed type.

### Large Door Width

Multi-panel cabin doors reach maximum opening width for handling large goods.

PRODUCT 05

# Car Elevator

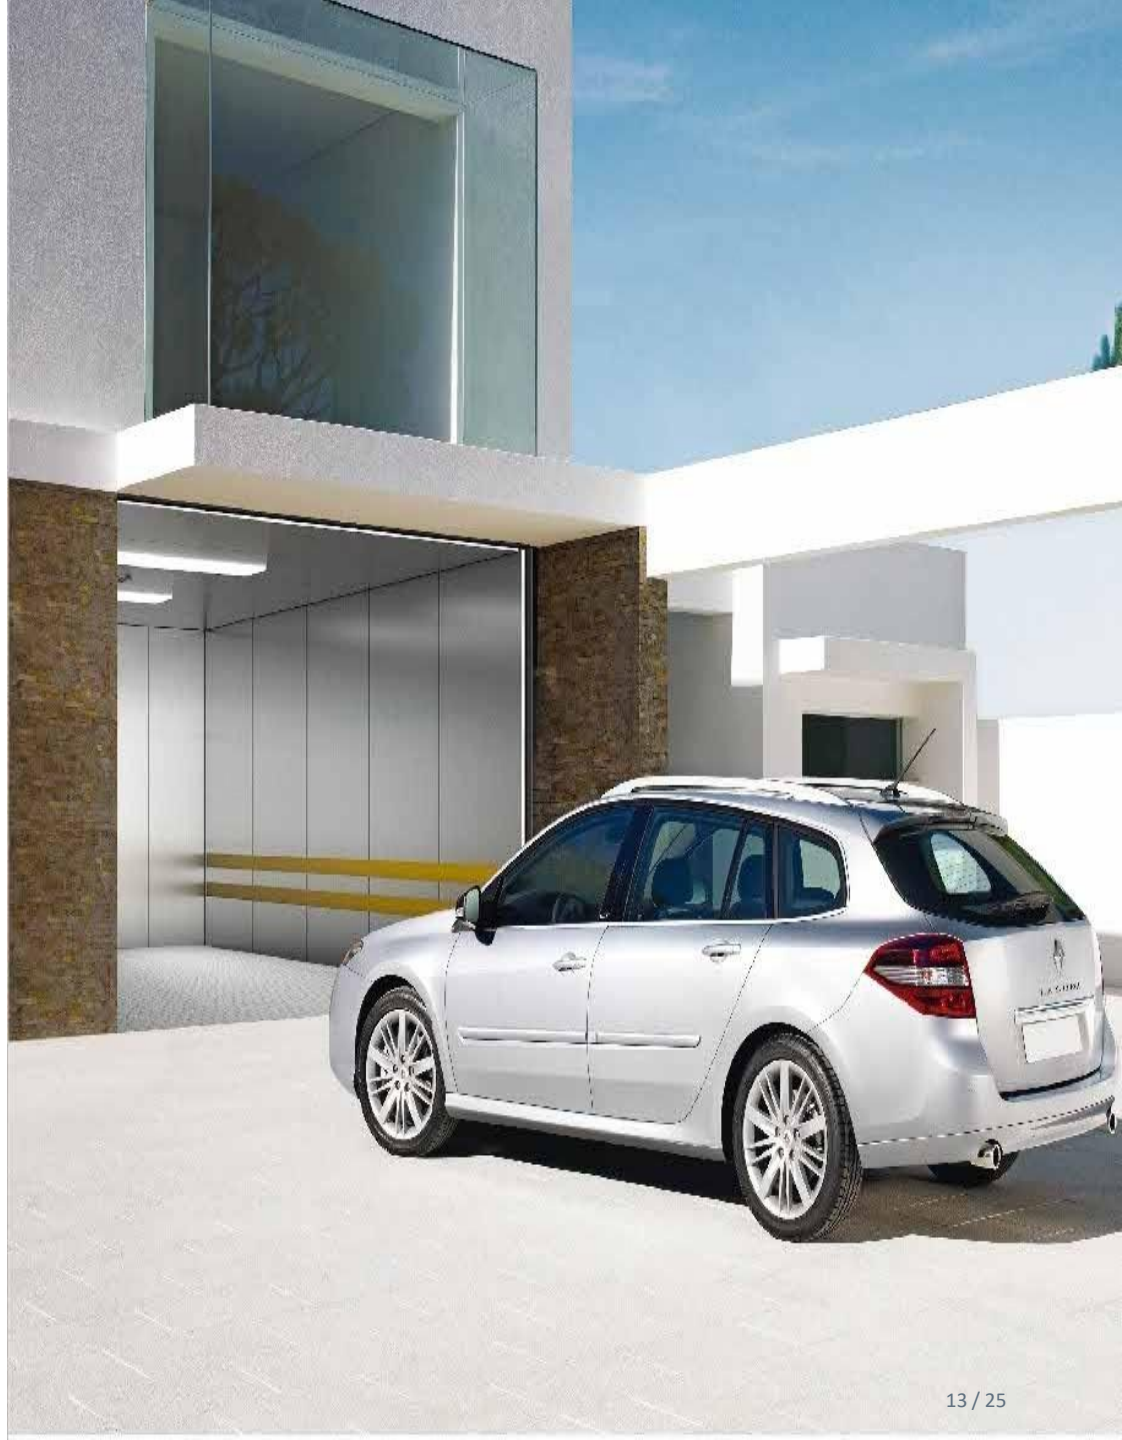

Car elevators provide a safe and efficient solution for transporting vehicles between different floors. Designed to handle vehicle loads with stability and precision, they are ideal for multi-level parking facilities, residential buildings, commercial properties, and locations where conventional ramps are impractical.

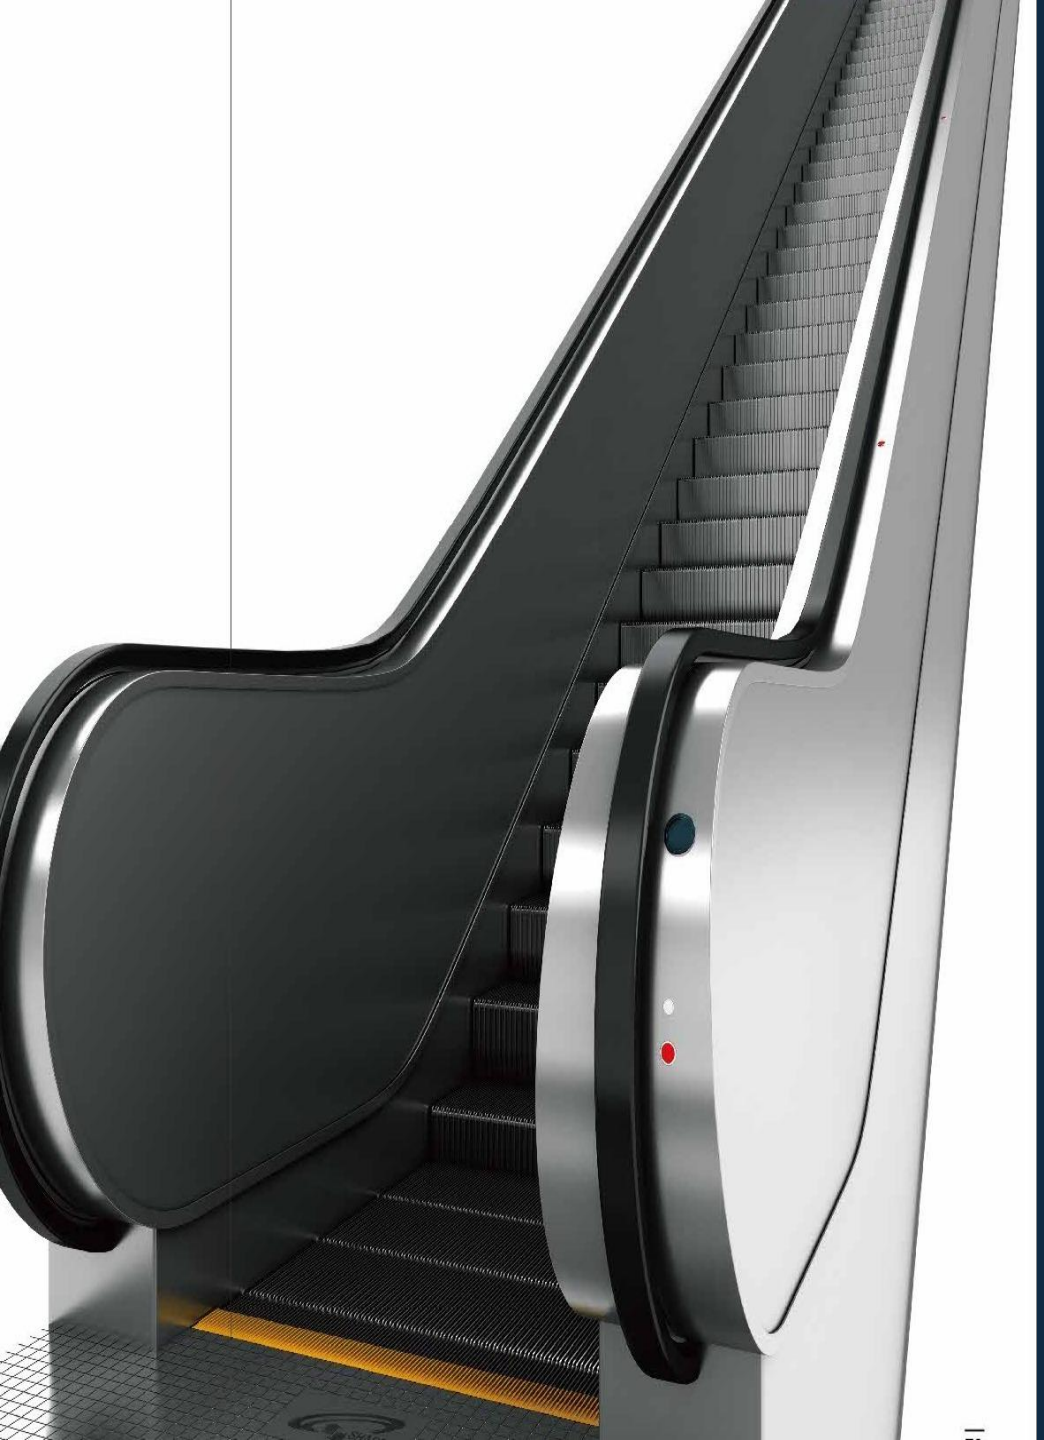

## Safe and Convenient

Car elevator solves the technical difficulties of noise and shaking cabin due to uneven outer force, offering maximum convenience, safety and comfort for use.

**Double COPs**

**Safety Protecting Device**

PRODUCT 06

# Escalator

Escalators are designed for efficient and continuous passenger movement in high-traffic environments. Suitable for shopping centers, supermarkets, subway stations, airports, and commercial buildings, they combine reliable performance, safety features, and modern design to provide smooth and convenient vertical transportation.

## Heavy-Duty Public Transport Escalator

Maximum travelling height of 25 meters, designed to endure harsh public-traffic environments while integrating aesthetics, safety, and environmental protection under the concept of "smooth operation."

## Safety Devices Include

Handrail inlet protection · Comb-plate safety device · Step sagging protection · Broken drive-chain and step-chain protection · Over-speed & direction-reversal protection · Emergency stop button

ADDITIONAL SOLUTIONS

# Specialized Elevator Solutions

## Panoramic Elevator

Highly secure laminated glass cabin walls with large-area glazing for the best sight-seeing view, available in semi-circular, square, cutting-angle and bulb cabin shapes.

## Home Elevator

No traditional machine room required, VVVF drive with micro-processing control, and an automatic special door operator — designed not to add construction load to the building.

## Dumbwaiter Elevator

Compact, light-load elevator requiring minimal space, with advanced PC control modules for stable movement and accurate leveling, in window or ground-loading types.

CABIN INTERIORS

# A Cabin Design Series for Every Building

## Concise

**SE-J101 – SE-J113**

Mirror etching hairline stainless steel finishes with clean, contemporary lines — 13 interior designs.

## Classical

**SE-J114 – SE-J126**

Mirror etching stainless steel with gold, rose gold, champagne gold and other refined finishes — 13 interior designs.

## Luxury

**SE-J127 – SE-J131**

Real wood, leather, mosaic and marble-floor finishes for a premium cabin experience — 5 interior designs.

*Cabin walls, ceilings, handrails and flooring are fully specified per model — including finish materials, LED lighting, and floor tile patterns — allowing each cabin to be matched to the building's architectural character.*

ENGINEERING & TECHNOLOGY

# Gearless Machine & Integrated Control

SHARP's permanent-magnet gearless traction machines pair with an integrated controller rated up to 7.0 m/s, supporting rated capacities up to 3,000 kg with markedly lower operating noise than traditional traction machines.

## Gearless Machine Models

| | |
|---|---|
| GTW9S | GTW10 |
| GTNH2 | GTN3 |

GTW9S

GTW10

GTNH2

GTN3

## Optional Add-Ons

Voltage stabilizer for undistorted, reliable power supply · Elevator Auto Rescue Device (ARD), which moves the cabin to the nearest floor and opens the door safely during a power failure.

# Efficient, Safe, and Built to Last

## Energy Saving System

**LED Lighting** ≈25,000 hr service life vs. 2,000 hr for incandescent lamps (about 12.5× longer); ≈32.5 W vs. 132 W power consumption (about 75% reduction).

**Destination Dispatch System (DDS) — optional** Allocates passengers to cabins by destination floor at the hall, reducing congestion and waiting/travel time.

## Escalator & Moving Walk Safety

- Lack-of-phase / error-phase protection
- Motor overload protection
- Handrail inlet protection
- Comb-plate safety device
- Step sagging protection device
- Broken drive-chain safety device
- Broken step-chain protection
- Over-speed protection
- Direction reversal protection
- Emergency stop button & skirt panel protection

# Standard & Optional Functions

## Standard Function

- VVVF drive & door operator for a smooth, comfortable ride
- Independent running & automatic pass without stop
- Reopen with hall call, express door closing
- Photocell door protection, repeated door closing
- Anti-stall timer & start protection control
- Up/down over-run and over-speed protection (1.2×–1.4× rated)
- Fault self-diagnosis — logs 62 latest faults
- Floor & direction indicators, arrival gong

## Emergency & Energy-Saving Function

- Emergency cabin lighting & five-way intercom
- Fire emergency return to designated landing
- Cabin ventilation / light automatic shut-off & remote shut-off

## Optional Function

- Leveling when power failure (battery-assisted)
- Anti-nuisance & open-the-door-in-advance
- Direct parking for improved travel efficiency
- Group control for 3+ elevators & duplex control
- On-duty / off-duty peak service scheduling
- Door open time extending
- Voice announcer & cabin assistant operation box
- Operation box for the handicapped
- Intelligent (IC card) calling service
- Remote monitor, remote control & in-cabin camera

# Built for Heavy-Duty Reliability

## Standard Function

- Group selection control without an operator
- Reopen with hall call during door shutting
- Automatic return to the base station
- Directly running mode from cabin commands only
- Automatic pass without stop near preset load
- Re-leveling upon power recovery
- Overload holding stop & anti-stall timer protection
- Up/down over-run & over-speed protection
- Photocell door protection
- Inspection operation at inching speed

## Emergency & Optional Function

- Emergency cabin lighting & five-way intercom
- Fire emergency return to rescue landing
- Micro-touch buttons for cabin & hall call
- Floor & direction indicators inside cabin and in hall
- Cabin assistant operation box for crowded loads
- Energy-saving cabin ventilation shut-off
- Operation control at stations — restrict specific floors (optional)
- Door open time extending for loading/unloading (optional)

CUSTOMIZATION

# Tailored to Your Building

### Handrail Color

Black (standard); red, orange, coffee, silver grey, blue (optional)

### Inner / Outer Decking

Stainless steel; silver grey painted or beige painted (optional)

### Landing Plate

Aluminum alloy (standard); stainless steel or hairline stainless steel (optional)

### Comb Lighting

White LED (standard/optional); green LED (optional)

### Skirt Panel Lighting

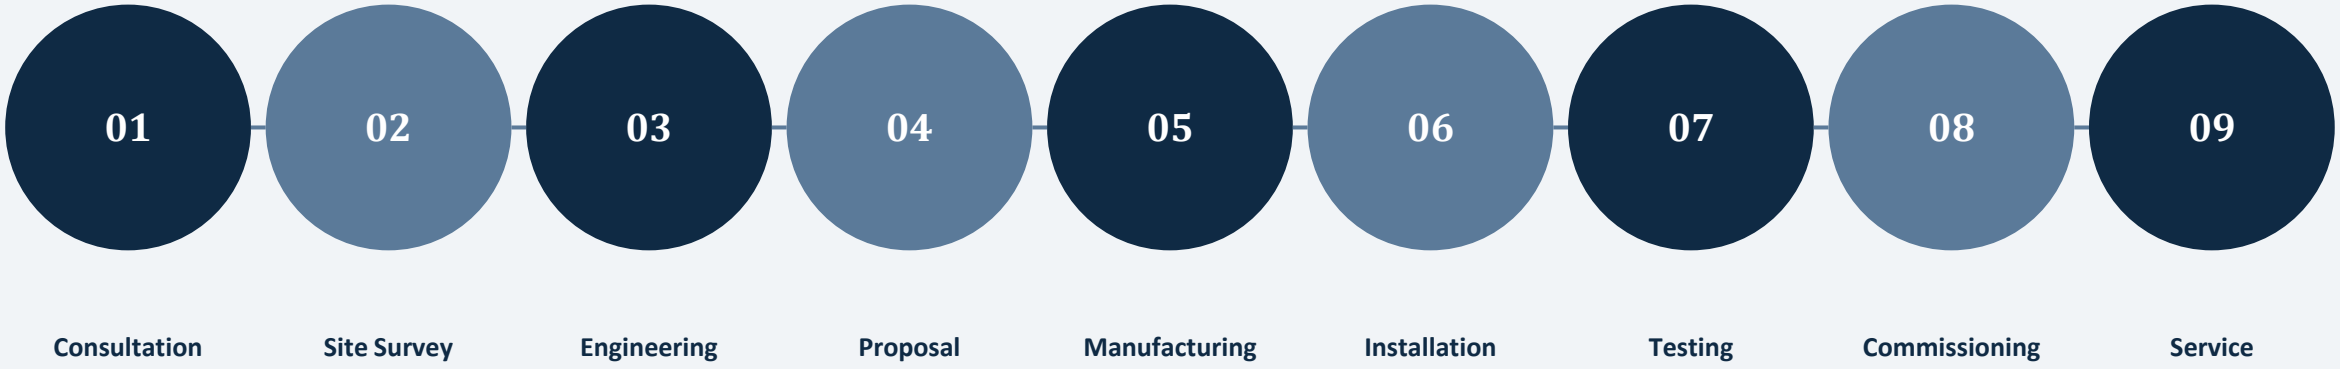

White (standard); white, yellow, or green (optional)

### Outer Cladding Decoration

Hairline stainless steel finish

PROJECT PROCESS

# From Concept to Completion

*DSAB Lift coordinates every stage of the elevator lifecycle in Indonesia — from initial consultation through engineering, installation, and ongoing after-sales service — supported by SHARP's global manufacturing and technical standards.*

# Layout & Safety Clearances

## Layout Arrangements (Escalator / Moving Walk)

### Interrupted Arrangement

Covers small spaces with flexible positioning; suited to small shopping centers and supermarkets.

### Parallel & Continuous

Applicable for large shopping centers and public traffic areas with two-way continuous flow.

### Cross & Continuous

Suited to large department stores and public buildings requiring minimal delivery time between floors.

### Continuous Arrangement

Fulfils one-way continuous passenger flow for medium and small department stores.

## Safety Distance Requirements

| | |
|---|---|
| **≥ 2.3 m** | Vertical safety distance from any obstacle at any point on the step/pallet |
| **> 80 mm** | Horizontal distance from the handrail outer edge to a wall or obstacle |
| **> 2.1 m** | Vertical safe distance above the handrail space |
| **> 0.5 m** | Horizontal distance between the handrail center and an object at floor/cross layouts |
